
Three ways to pay Autopilot Labs to [automate your work with AI](#). The default — and what most teams pick — is per-outcome: you pay only when the AI finishes a job that passes the SLA. No seats. No tokens. No platform fees.

SECTION I · MODELS

01

— THREE OPTIONS · ONE PHILOSOPHY

Pick the [shape](#) of the line on your P&L.

Same SLA, same infrastructure, same team. The difference is how you prefer to budget. We default everyone to outcome pricing unless there's a reason not to.

Retainer

A flat monthly for teams that need predictability and a single line item for the board.

A\$ **9,800**

/ month · from · billed monthly

- ◆ Up to 3 agents running in parallel
- ◆ Unlimited outcomes within scope
- ◆ SLA: 98.0% on-time
- ◆ Quarterly scope & volume re-negotiation
- ◆ Dedicated Slack channel · 2 ops reviews / month
- No per-task overage · capped by scope
- Not available below 10k outcomes / mo

BEST FOR

Teams who need AI as a stable budget line — enterprise procurement, public-sector contracts, and operators who track opex to the dollar.

Per-task

Our default. Zero base fee. You pay only when an outcome ships and passes the SLA. If we miss, you don't pay.

A\$ **0.40** – A\$12

/ outcome · tiered by complexity

- ◆ Pay only for SLA-passing outcomes
- ◆ SLA: 99.1% on-time · credit-back on miss
- ◆ No token, seat or infra pass-through
- ◆ Scales from 100 / mo to 2M+ / mo
- ◆ Real-time ops dashboard · auto credit-back
- ◆ Quarterly rate review · margin passed on
- ◆ 30-day off-ramp · data & weights go with you

BEST FOR

Teams whose workload genuinely varies, CFOs who want variable cost tied to variable value, and anyone tired of paying for idle seats.

Base + outcome

A small monthly base to keep agents warm-pathed, plus a discounted per-outcome rate. The most popular plan at

volume.

A\$ 1,800

/ mo base · + A\$1.95 — A\$8 / outcome

- ◆ Up to 35% discount on per-task rate
- ◆ SLA: 99.3% · priority routing & retry
- ◆ 500 warm-path credits included / mo
- ◆ Most popular at 20k+ outcomes / mo
- ◆ Volume-tier rate-card re-indexed quarterly
- ◆ Shared ops review · dedicated solutions engineer
- Base is non-refundable · outcomes are pay-as-ship

BEST FOR

Growing teams with a predictable floor and a variable ceiling — most clients migrate here around month three.

SECTION II · RATE CARD

02

— PUBLISHED · LIVE · IN AUD

Sample per-outcome rates

across the thirteen verticals.

These are starting rates before volume tiers and hybrid discounts. Every rate is in writing, every invoice itemised, every SLA miss auto-credited.

SECTION IV · THE FINE PRINT

04

FREQUENTLY ASKED

Questions we want you to ask.

Ten answers to the questions every CFO asks before they'll sign a variable-cost line. If your question isn't here, email us — we publish new answers monthly.

01

What exactly is an "outcome"?

x

An outcome is a finished unit of work, defined in the statement of work before we start. For a discovery agent, it's a document tagged and written to Relativity. For a reconciliation agent, it's a ledger entry drafted and approved. Every outcome has a pass/fail SLA criterion — we don't bill the fails.

02

What happens if an agent misses the SLA?

+

03

Do you pass on inference / model costs?

+

04	Currency? We're not in Australia.	+
05	Minimum term & exit terms?	+
06	How do you handle regulated data?	+
07	What's the minimum volume?	+
08	Do you charge for the audit if we don't proceed?	+
09	Can you build a bespoke agent outside the catalogue?	+
10	Who owns the IP?	+

— PRICING IS MEANINGLESS WITHOUT A WORKFLOW

Let's see what your
outcomes should cost.

The audit is free. The quote is published. The SLA is in writing. Book two weeks with us and you'll leave with a per-outcome rate for your most painful workflow — or a very polite no.

Agents that finish.

Autopilot Labs is an AI workflow studio with hubs in Melbourne, Dubai and Riyadh. We build vertical agents across fourteen practice areas — thirteen industries plus an always-on voice desk in 14 languages (Arabic included) — and bill per completed outcome. Not per seat, not per token.
