

Four steps to [automate a workflow with AI](#). Fourteen working days from the first audit meeting to the first AI agent live in production. No transformation decks. No change-management theatre. Just work that used to be human, and isn't anymore.

◆ AVG AUDIT → DEPLOY 14_d Across 38 engagements	◆ AUDITS THAT SHIP 68% We turn down ~1/3
◆ RETENTION AT 12 MO 94% Clients who stay	◆ MEDIAN ON-TIME SLA 99.1% Across 2026 YTD

How a workflow becomes an agent in production.

Every engagement follows the same four phases. The audit is on us. Only if we find work we can confidently automate do we quote.

01

PHASE 01 · DAYS 1–5 · WORKFLOW AUDIT · FREE

We sit inside your actual workflow.

A two-person Autopilot Labs team spends five working days embedded with the operators who do the work today. We shadow, we screen-record, we map every touch-point. You keep the map whether or not you hire us.

- ◆ Observe 3–5 operators doing the work end-to-end
- ◆ Time-and-motion study · time-per-task heat map
- ◆ System inventory & data-flow diagram
- ◆ Shortlist of 3–5 agent candidates, ranked by ROI

02

PHASE 02 · DAYS 6–8 · SCOPE & QUOTE

We quote the **per-outcome rate** — or we walk.

From the shortlist, we pick the one or two agents we can confidently SLA. We quote a per-outcome price, an SLA, and a kill-switch. If we don't find work we can ship, we tell you so. About a third of audits end here.

- ◆ Per-outcome price + volume tiers
- ◆ SLA contract — % on-time, credit-back schedule
- ◆ Data-handling & residency agreement
- ◆ 30-day kill-switch clause, no notice period

03

PHASE 03 · DAYS 9–12 · BUILD & SHADOW

Agents run **beside** your team, not over them.

We build in 4 working days. The agent runs in shadow mode — it produces every outcome, but a human still owns the final click. We compare. When the agent matches the human on 200 consecutive tasks, we flip it live.

- ◆ Agent built on your data, not a generic model

- ◆ Integrations to your systems (OAuth, SCIM, SSO)
- ◆ Shadow mode · side-by-side comparison dashboard
- ◆ Go-live criteria published & agreed in writing

04

PHASE 04 · DAY 14+ · OPERATE & MEASURE

Agents work. **We report.** You pay for outcomes.

The agent is live. You see every outcome in your ops dashboard — timestamped, costed, audit-trailed. You pay only for SLA-passing work. If we miss the SLA, the credit-back is automatic and appears on next month's invoice.

- ◆ Real-time ops dashboard · Slack/Teams alerting
- ◆ Monthly outcome review · quarterly rate review
- ◆ Credit-back auto-applied for SLA misses
- ◆ 30-day off-ramp · weights & data go with you

SECTION II · PRINCIPLES

02

— WHAT WE REFUSE TO DO

Eight articles we've signed our **name** to.

These aren't marketing. They're the clauses in our contracts — and the reasons we've turned down engagements that would have been easy revenue.

The Autopilot Labs **articles**.

We sign these into every statement of work. If we ever violate one, the engagement terminates that day and every outcome billed in the breach period is refunded.

/.

No seat-based billing.

Ever. You pay for finished work, or you pay nothing. Seats punish adoption; we want adoption.

II.

No token pass-through.

Inference cost is our problem. If our model gets cheaper, we keep the margin — and pass it on at the next quarterly rate review, in writing.

III.

We turn work down.

If the audit shows the workflow isn't ripe — not enough volume, too much judgement, bad data — we say so and we walk. Roughly a third of audits end this way.

IV.

Humans own the final click.

For every regulated or high-blast-radius workflow, a human approves before anything irreversible. We make that click fast, not absent.

V.

SLA misses refund automatically.

No support ticket. No negotiation. Missed outcomes credit back on the next invoice without you asking.

VI.

Your data leaves when you leave.

Weights trained on your corpus are yours. On churn, we hand over weights, logs, and export artefacts within 30 days — and purge our side.

VII.

We don't sell AGI.

We sell finished tasks in your industry. If the job needs cross-vertical general reasoning, we're honestly not the shop.

VIII.

Plain English, always.

If a clause in our contract needs a lawyer to translate, we rewrite it. Your ops team should be able to audit our SLA without legal on the call.

— PHASE 01 · DAYS 1–5 · FREE

Put one workflow on the **audit schedule**.

We've got four slots left for the Q2 audit cohort. If we can't ship, we won't quote. If we can, you'll see the per-outcome price before we write a line of code.

Agents that **finish**.

Autopilot Labs is an AI workflow studio with hubs in Melbourne, Dubai and Riyadh. We build vertical agents across fourteen practice areas — thirteen industries plus an always-on voice desk in 14 languages (Arabic included) — and bill per completed outcome. Not per seat, not per token.
